## Delaware River Seine Survey: 2009 Sampling Summary

Fish and Wildlife workers hauling in a net
From June 15 to November 10, 2009, biologists conducted the Delaware River Seine Survey. Over the course of these five months, crews hauled 318 individual seines. In total, 55,510 fish were caught, averaging 174 fish per haul. The five most abundant species caught were: American shad, bay anchovy, white perch, banded killifish and blueback herring.

| Common Name | Total Number | Relative Abundance | Frequency of Occurrence |
| :---: | :---: | :---: | :---: |
| American Shad | 10,640 | 19.168\% | 66.981\% |
| Bay Anchovy | 6,415 | 11.556\% | 38.679\% |
| White Perch | 6,271 | 11.297\% | 63.836\% |
| Banded Killifish | 6,188 | 11.148\% | 54.717\% |
| Blueback Herring | 6,096 | 10.982\% | 43.082\% |
| Mummichog | 3,399 | 6.123\% | 39.308\% |
| Atlantic Menhaden | 3,071 | 5.532\% | 15.723\% |
| Eastern Silvery Minnow | 2,834 | 5.105\% | 47.799\% |
| Striped Bass | 2,328 | 4.194\% | 66.352\% |
| Spottail Shiner | 2,282 | 4.111\% | 44.340\% |
| Herring Species | 1,965 | 3.540\% | 0.314\% |
| Atlantic Silverside | 1,232 | 2.219\% | 30.818\% |
| Tessellated Darter | 841 | 1.515\% | 24.843\% |
| Rough Silverside | 409 | 0.737\% | 11.635\% |
| Gizzard Shad | 275 | 0.495\% | 17.296\% |
| Alewife | 269 | 0.485\% | 7.233\% |
| Hogchoker | 242 | 0.436\% | 10.692\% |
| Channel Catfish | 157 | 0.283\% | 15.723\% |
| Blue Crab | 111 | 0.200\% | 13.836\% |
| Bluefish | 79 | 0.142\% | 11.006\% |
| Atlantic Croaker | 62 | 0.112\% | 3.459\% |
| Bluegill Sunfish | 57 | 0.103\% | 9.119\% |
| Pumpkinseed Sunfish | 51 | 0.092\% | 6.604\% |
| Inland Silverside | 37 | 0.067\% | 3.459\% |
| American Eel | 26 | 0.047\% | 6.289\% |
| White Sucker | 21 | 0.038\% | 4.403\% |
| Golden Shiner | 19 | 0.034\% | 3.459\% |
| Yellow Perch | 15 | 0.027\% | 3.774\% |
| Spot | 13 | 0.023\% | 2.830\% |
| Carp | 12 | 0.022\% | 3.145\% |
| Smallmouth Bass | 11 | 0.020\% | 2.516\% |
| Black Bullhead | 8 | 0.014\% | 1.572\% |
| Banded Sunfish | 6 | 0.011\% | 1.887\% |
| Crevalle Jack | 6 | 0.011\% | 1.887\% |
| Striped Anchovy | 6 | 0.011\% | 1.258\% |
| Weakfish | 6 | 0.011\% | 1.572\% |
| White Catfish | 6 | 0.011\% | 1.887\% |
| Atlantic Needlefish | 5 | 0.009\% | 1.572\% |
| Brown Bullhead | 5 | 0.009\% | 0.943\% |
| Comely Shiner | 5 | 0.009\% | 1.258\% |
| Four-spined Stickleback | 5 | 0.009\% | 1.258\% |
| Hickory Shad | 5 | 0.009\% | 0.314\% |
| Largemouth Bass | 5 | 0.009\% | 1.258\% |
| Summer Flounder | 5 | 0.009\% | 1.572\% |
| Walleye | 3 | 0.005\% | 0.943\% |
| Black Drum | 2 | 0.004\% | 0.314\% |
| Mosquitofish | 1 | 0.002\% | 0.314\% |
| Redbreast Sunfish | 1 | 0.002\% | 0.314\% |
| Silver Perch | 1 | 0.002\% | 0.314\% |
| Spanish Mackerel | 1 | 0.002\% | 0.314\% |
| Grand Total | 55,510 | 100.000\% |  |

The primary target species of this survey is striped bass. In 2009, this species was the ninth most abundant fish caught. In total, 2,328 striped bass were caught and 2,237 of those were young-of-year striped bass. This means that $96 \%$ of the striped bass caught were less than 1 year old.

Young striped bass caught during 2009 survey
One of the unique fish caught during the 2009 survey was the walleye. Biologists caught three walleye total. From 1980 through 2008, only 4 walleye had been caught in this survey. The smallest walleye caught to date was 186 mm (fork length), caught in 2004. However, two of the three fish caught in 2009 were smaller than 75 mm . These three fish were caught in Region 3, the northern-most region where the water is mostly freshwater. Some distinguishing characteristics of the walleye include:

- large mouth with large canine teeth
- opaque silver eye
- forked tail
- yellow-olive to brown top
- brassy yellow-blue sides
- 5-12 dusky saddles
- large black spot on first dorsal fin
- wavy dark brown bands on yellow fins
- white tips on anal fins and lower caudal fin

213 mm walleye caught during 2009 sampling
All water quality parameters for 2009 were within normal range. Water temperatures ranged from 10.5 to 28.5 degrees Celsius. Dissolved oxygen levels ranged from 4.6 to 10.2 milligrams per liter. Salinity values ranged from 0 to 7.4 parts per thousand.

Overall, 2009 was a typical survey year. There were no drought or flooding conditions to affect the catches, and other outside environmental influences were at a minimum. Here's to hoping that 2010 will be another successful survey year!
