NOTE: This table expresses arrow sizes in two ways. The first approach uses length L and width W (see diagram above left). These dimensions are shown in the first column above. The second approach takes into account the skew angle from horizontal and dimensions a rectangle surrounding the arrow. The diagram (above right) shows how these dimensions would be derived. These dimensions are shown in the second, third and fourth columns. Measurements for arrows shown in this manual are referenced to the first (W x L) approach, but can be referenced to the other approach by reading across the table to the appropriate skew angle.
